

Plant-based Material Eco-Friendly **Biomass Kitchen Sponge**

**FEATURES** Kitchen sponge that certified biomass mark

The sponge and non-woven fabric parts are made of more than 50% plant-derived materials (walnuts, etc.) and are certified as biomass marks.

This contributes to saving petroleum resources and reducing CO2 emissions. Some vegetable-derived materials are also used for the packaging film and ink.

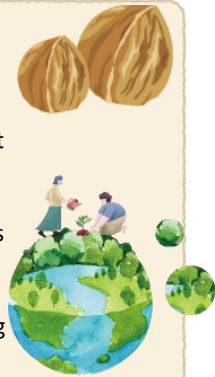

STAFF VOICE

After three years of development, we are now ready to launch the product.

It blended more than 50% plant-derived raw materials, and improve the quality of the product which deteriorates more quickly than conventional petroleum-derived products, and finally develop a product that can be proposed as a biomass kitchen sponge.

We would like to propose to everyone to take action to protect the global environment, starting with our daily dishwashing.

**KBM01**

**Kitchen Sponge Soft Biomass**

- 01** Non-woven fabric with walnut-derived particles to remove dirt without scratching.
- 02** A sponge that is good to contain detergent and foam. Made of plant-derived materials.
- 03** Profiled sponge that lathers well and removes dirt easily. Made of plant-derived materials.

**KBM02**

**Kitchen Sponge Net Biomass**

- 01** A sturdy net to scrub away dirt.
- 02** A sponge that lathers and dries quickly. Made of plant-derived materials.
